

AHMED SAAD MOHAMMED

Junior Backend Developer — PHP & Laravel

Cairo, Egypt | +20 115 384 7691 | ahmedaboelresh2004@gmail.com

Portfolio: portfolio-kappa-dusky-17.vercel.app | GitHub: github.com/aboelresh | LinkedIn: linkedin.com/in/ahmed-saad-asm3

PROFESSIONAL SUMMARY

Junior Backend Engineer specializing in Laravel and PHP, with a working understanding of REST API design, relational database modeling, and object-oriented principles (OOP, SOLID). Built seven full backend systems independently, including a real-time communication platform, a course-progression learning platform, and multi-role approval workflows, rather than following tutorials. Focused on advancing software testing, deployment workflows, and scalable backend architecture. Looking for a Junior Backend Engineer or Laravel Developer role to contribute to and grow within a professional engineering team.

TECHNICAL SKILLS

Core Backend: PHP 8, Laravel, RESTful APIs, MVC, OOP, SOLID Principles, Design Patterns, Domain-Driven Design

Databases: MySQL, Database Design

Development Tools: Git, GitHub, Postman, Swagger/OpenAPI, Redis, Laravel Queues

Frontend Fundamentals: HTML, CSS, JavaScript

Software Engineering: Data Structures, Algorithms, Design Patterns (GoF), System Design Basics, Clean Code Principles

Familiar With: PostgreSQL, Query Optimization, Indexing, PHPUnit, Unit/Feature Testing, Docker, Linux, Nginx, GitHub Actions, CI/CD, AWS (EC2, S3), DigitalOcean, VPS Deployment, WebSockets, WebRTC, CCNA Networking, CompTIA A+

Languages: English (B2 – Berlitz Certified), Arabic (Native)

EDUCATION

Bachelor of Science (B.Sc.)

2026

Management Technology and Information Systems

Port Said University — Faculty of Management Technology and Information Systems | Grade: Very Good (B+)

PROJECTS

NexusPlatform — Enterprise Communication Platform 2025

Tech Stack: Laravel 12, PHP 8.2, MySQL, Redis, WebSockets, WebRTC, Sanctum, Spatie, Queue Workers

GitHub: github.com/aboelresh/nexus-platform

- Architected a real-time communication backend in Laravel 12 using Domain-Driven Design, organizing the system into 10 bounded business domains (Auth, Chat, Groups, Calls, Notifications, and others).
- Designed and built 76+ versioned REST API endpoints (/api/v1/) covering authentication, messaging, groups, and call management.
- Implemented real-time messaging with WebSockets via Laravel Reverb, and integrated WebRTC signaling for voice and video calls.
- Developed role-based access control (Owner/Admin/Moderator/Member) to enforce granular permissions across chat groups and channels.
- Delivered a Postman collection with 200+ automated tests, plus a developer console exposing health checks and system diagnostics.

Code Master — Programming Learning Platform 2025 (Private Repository)

Tech Stack: Laravel, PHP 8, MySQL, Redis, RESTful APIs, Background Jobs

- Designed a prerequisite-gated course progression system, implementing validation and authorization rules in Laravel to prevent learners from advancing without passing required exams.
- Modeled many-to-many relationships between learners and project teams using Eloquent, supporting shared workspace access without duplicating user data.
- Implemented an analytics component that aggregates exam results and engagement data into a structured learner profile, keeping data-aggregation logic separate from presentation.
- Integrated Laravel Queues to move long-running background tasks off the request-response cycle, keeping user-facing endpoints responsive.

Repository is private — retained as personal intellectual property. Architecture and implementation details available on request.

Additional Projects

- Student Affairs Management System 2024 (Laravel, PHP 8, MySQL, RESTful APIs, Encryption)** — designed a multi-role approval workflow with encrypted storage for sensitive student records and a real-time status-tracking endpoint.
- University Dorm Management System 2024 (Laravel, PHP, MySQL, Bootstrap)** — designed a relational schema for student registration, automated room allocation, and maintenance tracking, with role-based admin access.
- News Aggregation & Summarization Platform 2025 (Laravel, PHP, MySQL, External APIs)** — **Private Repository** — designed an ingestion pipeline aggregating and classifying articles from multiple external APIs, with text-summarization logic to reduce length while preserving key information.
- Secure Messaging System 2025 (PHP, MySQL, Encryption)** — **Private Repository** — designed a messaging schema separating metadata from encrypted content, with encryption applied at both storage and transmission layers.
- Rafeeq — Educational Platform for Beginners 2023 (PHP, MySQL, CMS)** — **Private Repository** — designed a structured lesson and quiz data model with a content management layer for non-technical administrators.

Private-repository projects above are retained as personal intellectual property; implementation details available on request.

CERTIFICATIONS & CONTINUOUS LEARNING

- English Language Proficiency — B2 Level, Berlitz International (2024)
- Continuous self-directed learning via official documentation: Laravel, Docker, AWS, PostgreSQL, Redis
